Phonetic Search How long does xanax stay in your system, it is really good that we understand the dosage, administration and usage of Every individual faces stress, tension or anxiety due to hectic routine of daily work, but it does not require any medication. If the problem persists for more than six months then it has to be looked after. Xanax is very helpful for such persons, who have symptoms of depression. Xanax is also recommended for every day to get a positive response. The dosage should start with a minimum of 0.25 or 0.5 mg daily and increased after three to five days to 1 mg daily. The dosage should be distributed evenly throughout the day. To reduce the adverse effects, minimum dosage is advisable to the patients. Avoid abrupt discontinuation of taking medicine since it is very likely to result in adverse effects. A gradual decrease in dosage leading to getting rid of the medication can lessen chances of getting addicted. I KNOW THE TRUTH! Hope that got some attention. Xanax is a benzo that metabolizes faster than other benzos. Still depends on length and amount of use, body fat and your metabolism. In general an occasional user can bet on xanax showing in a urine test for up to five days. I have personally tested positive for Valium 21 days after stopping. I learned the hard way on that one. Opiates can show up to 7 days and coke takes 4 almost no matter how much you do or how much water you drink. Here are some tips. Drink lots of fluids. If

you can get in some good exercise and drink plenty of water during and after. However, do not exercise the day before the test because it will flush the metabolites out of your muscles and fat and in to your urine and you will piss dirty. Spend the day before drinking water but not too much water too fast or you can get water intoxication and die! No shit look it up. The least harmful thing and the hardest to get out is weed. Funny huh. If your a pot head and need to be ready for a random test ditch the weed and go to a head shop and get some K2. Looks like ground up weed and is labeled as an aroma-therapy product not for human consumption . It s about 20 bucks for three grams and is really harsh but it definately gets you stoned. I didn t believe it till I tried it. It s still legal in most states but many are voting on it because they just can t have something out there that makes you feel good, helps with menstrual cramps, great for nausea or for me helps with my lack of appetite. Otherwise weed can stay in your urine for up to 90 days for a regular user. You can go to your local head shop and talk to the manager, not the kids that just started there because it s cool and ask what detox products they have had positive feedback on and follow the directions exactly but don t bet the farm on it and party like a rock star and think the detox product will work. WHILE YOU ARE THERE BUY A COUPLE OF 5 PANEL DRUG TESTS. Most companies have gone to the 5 panel dip tests not only for instant results but it s much cheaper than sending it off to a lab. This way you will know how you are doing with flushing your system. The 5 panel test generally test for amphetamine/methamphetamine/pcp, coke, benzo, opiates and thc. If you operate heavy machinery or do commercial driving expect a broader test that includes barbituates, tricyclic anti-depressants, methadone/methaqualone, oxycodone, propoxyphene (opiates), buprenorphine (suboxone, subutex).
