Alright I want to clarify this for me and the rest of the people in my area. Many people say that the green S 90 3 xanax bars are 3 mg....makes sense, they are double scored making three segments into even 1mg doses. I mean why would they score a pill that wayand give uneven doses?? Two more things that suggest that it is 3mg is the fact that it is green, similar to thexanax XR 3mg trianglesand has the 3 imprinted just as the triangles do. I know with alprazolam tablets color can often confuse many but domestic tablets seem to go by pretty much the same color scheme. For example: white scored once usually .25mg, peach .5mg, blue or purple 1mg, white or yellow 2mg tri-scored or pie cut, and of course the green 3mg triangles. So with that said, is it too good to be true? Are the green S 90 3 xanax bars only 2mg and not 3? i was under the impression that the green bar was a new release and was 3mg normal release xanax instead of xanax XR. Heres a pic of the green bar if you have not seen it. Thanks.Xanax-Online-j145m
